Authorize

POST `/api/auth/login` Log in and receive a JWT

Verifies email + password under the given tenantDomain. Returns 401 with a generic 'Invalid credentials' message on any failure (does not disclose whether the email exists).

Parameters

Try it out

No parameters

Request body required

application/json

Example Value | Schema

```
{
  "email": "violet@agency-a.com",
  "password": "password123",
  "tenantDomain": "agency-a.com"
}
```

Responses

Code	Description	Links
200	Login successful; returns token + user	*No links*
